

The  
University  
Of  
Sheffield.

# Chemical & Biological Engineering

**Catriona Brownlie** from  
Guisborough, Cleveland

**Year 3 – MEng Chemical  
Engineering**

## **Why did you choose Sheffield?**

I chose Sheffield as I really liked the feel of the city when I visited on open days.

## **What do you like about:**

### **The Department?**

I really like the fact that the Department has such strong connections between each year. This is really strengthened through numerous socials including the traditional three legged bar crawl in freshers week.

### **The University?**

The University is brilliant, there is so much to get involved with here with hundreds of societies and sports teams. Also, if there isn't a society that you want to join, you can even set up your own!

### **What has challenged you so far?**

I found the transition from A levels to the more independent university level work difficult. Despite this, I found the department really supportive with any problems, and lecturers were usually available to assist with any queries regarding the course.

### **What has surprised you about your course?**

The amount of group work within the course really surprised me. Literally from the first few weeks of term we were regularly placed into groups and asked to complete an assignment. Although daunting at first, this has led to invaluable communication skills being obtained.

### **What have you gained from completing your Design Project?**

The structure of the design project is such that there are essentially two parts, a group project and then an individual report. I found it a useful exercise to have the group project as it allowed me to experience working within a team under pressure, which simulates actual industrial life.

### **What have you learned about yourself?**

I have learnt a lot about myself during my time at Sheffield. The course itself has been challenging and demanding, however this has allowed me to see that I really want to go into engineering and I feel as though the skills that I have obtained whilst at Sheffield have well equipped me for a life in industry.
