

The
University
Of
Sheffield.

Chemical & Biological Engineering

James Craven from
Middlesbrough, Cleveland

Why did you choose Sheffield?

A combination of a good course, respected University and diverse city.

What do you like about:

Sheffield?

The Times online describes Sheffield as: "An up-and-coming vibrant city with all the benefits of a warm and friendly close-knit community." Personally, I couldn't agree more.

The Department?

The department is both forthcoming and friendly from outside to in.

The University?

Many things; though having a central city University with the proximity benefits of a campus is ideal.

What has challenged you so far?

The course isn't easy, but then again at least you'll have something of some worth on leaving University.

Has your course lived up to your expectations?

Definitely; the balance is just right between contact hours and personal study. But one thing I wasn't counting on was Dr. Pitt – what a great guy.

How have you found completing your Research Project?

Personally I have found it to be enjoyable. But let's be honest; how could anyone possibly shy away from a subject as appealing as straw combustion?

What have you learned about yourself?

Let's not rely on straw for our energy needs of the future.

What are you going to do next?

Fortunately I've been accepted on to the Energy Futures PhD programme. So another 4 years at University.

**Year 4 – MEng Chemical
Engineering**
