University  
Of  
Sheffield.

# Chemical & Biological Engineering

**Rhiannon Griffies** from  
Bishopston, Bristol

**Year 3 – MEng Chemical  
Engineering**

## **Why did you choose Sheffield**

Sheffield has a great reputation both as a fantastic university for engineering and as a friendly city to live and study in and many friends I know had a great time here.

## **What do you like about:**

### **Sheffield?**

The city feels small and friendly while it is still a big city, it has all the necessary amenities and it is easy to get out into the Peak District when you need some fresh air!

### **The Department?**

The Department is fairly small which means that I know lots of the other students, in both my year and others. I also know a lot of the staff members and they are always around and approachable if you need help with the course or to discuss personal problems.

### **The University?**

There is always so much going on; activities during the day for every, and any, special occasion, there are club nights most nights of the week. You can get involved with any society you could wish for, and you can get involved in the local community as well.

## **What has challenged you so far?**

There is a lot of group work and this can be challenging as different people have different working styles and like to take on different roles when working in a group. However, this has been a really important aspect of the course as you will always have to work with others in the outside world.

## **What have you gained from completing your Design Project?**

I got a great sense of achievement from the completion of this project, in total we were working on the project for around 4 months so a lot of time and effort was put into it. I had to read around the subject but I found the project very interesting.

## **What have you learned about yourself?**

While at University I have learnt to be more independent in both studying and living, I have realised which aspects of Engineering I really enjoy and those which I don't and this will help me find a job I thoroughly enjoy.
